

How to cash out on coinbase: (Complete Guide)

Cashing out on Coinbase is a common task but it often causes confusion because **Coinbase** and **Coinbase Wallet** work differently. This guide explains **how to cash out** and **where your money goes** and **why some users get stuck** all in one place.

What Does “Cash Out” Mean on Coinbase?

Cashing out on Coinbase means converting your cryptocurrency into cash and withdrawing that money to your bank account or payment method. You are not just sending crypto somewhere else—you are turning it into fiat currency like USD, EUR, or GBP.

This process can only be completed inside **Coinbase (the exchange)** not directly inside **Coinbase Wallet**.

How Do You Cash Out on Coinbase?

To cash out on Coinbase you first sell your cryptocurrency. Once the crypto is sold your account balance becomes cash. From there you choose a withdrawal method such as a bank transfer or instant cash out.

After you confirm the withdrawal, Coinbase processes the request and sends the money through your bank or payment provider.

How to Cash Out From Coinbase

Cashing out from Coinbase follows the same flow every time. Crypto must be available in your Coinbase account; it must be sold, and the resulting cash balance must be withdrawn. If your funds are still crypto, you cannot cash out yet.

If your cash out option is unavailable, it is usually because the funds are on hold, still pending, or restricted due to account verification.

How to Cash Out in Coinbase

The wording may vary but cashing out “in” Coinbase means using the app or website to sell crypto and withdraw funds. Both the mobile app and desktop version support cash outs and the steps are nearly identical.

The key requirement is having a verified account and a linked withdrawal method.

How to Cash Out on Coinbase Wallet

You **cannot cash out directly from Coinbase Wallet**. Coinbase Wallet is a self-custody crypto wallet, not an exchange. It does not support selling crypto for cash or connecting directly to banks.

This is the most common reason users think cash out is “missing” or broken.

How Do I Cash Out on Coinbase Wallet?

To cash out when your crypto is in Coinbase Wallet, you must first send your crypto from Coinbase Wallet to your Coinbase exchange account. Once the crypto arrives in Coinbase, you can sell it and then withdraw the cash.

Coinbase Wallet only holds crypto, not cash.

How to Cash Out From Coinbase Wallet

The correct process is always the same. Transfer crypto from Coinbase Wallet to Coinbase. Wait for blockchain confirmation. Sell the crypto in Coinbase. Withdraw the cash to your bank.

Skipping any of these steps will prevent a successful cash out.

How to Cashout Coinbase (All Variations Explained)

Whether someone searches “cashout coinbase”, “cash out on coinbase”, or “cashout from coinbase”, they are all referring to the same action: selling crypto and withdrawing money.

If the cash out option is not available, it usually means one of the following is true. The crypto has not been sold.

yet 📞+1-877-(508)-(1626) The funds are still on hold 📞+1-877-(508)-(1626) The account is not fully verified 📞+1-877-(508)-(1626) The bank method is not set up correctly 📞+1-877-(508)-(1626)

Why Can't I Cash Out on Coinbase?

Users cannot cash out when funds are locked due to recent deposits ➡️📞+1-877-(508)-(1626) chargebacks ➡️📞+1-877-(508)-(1626) security reviews ➡️📞+1-877-(508)-(1626) or compliance checks 📞+1-877-(508)-(1626) Sometimes withdrawals are temporarily disabled to protect the account from fraud 📞+1-877-(508)-(1626)

Checking your available balance instead of total balance often explains why cash out is unavailable 📞+1-877-(508)-(1626)

How Long Does a Coinbase Cash Out Take?

Cash out timing depends on the withdrawal method 📞+1-877-(508)-(1626) Instant cash outs usually arrive within minutes 📞+1-877-(508)-(1626) Standard bank transfers may take one to five business days 📞+1-877-(508)-(1626) Processing time also depends on bank hours and regional regulations 📞+1-877-(508)-(1626)

Crypto network speed does not affect cash out timing once the crypto has already been sold 📞+1-877-(508)-(1626)

Final Summary

➡️📞+1-877-(508)-(1626) Cashing out on Coinbase is simple once you understand the difference between **Coinbase** and **Coinbase Wallet** 📞+1-877-(508)-(1626) Coinbase allows you to sell crypto and withdraw cash 📞+1-877-(508)-(1626) Coinbase Wallet does not 📞+1-877-(508)-(1626)

If your crypto is in Coinbase Wallet ➡️📞+1-877-(508)-(1626) you must move it to Coinbase first 📞+1-877-(508)-(1626) If you cannot cash out ➡️📞+1-877-(508)-(1626) it is almost always due to verification issues ➡️📞+1-877-(508)-(1626) holds ➡️📞+1-877-(508)-(1626) or unsold crypto—not a system error 📞+1-877-(508)-(1626)

Once these basics are clear ➡️📞+1-877-(508)-(1626) cashing out becomes a straightforward and predictable process 📞+1-877-(508)-(1626)
